Dear N S DHEEPAK SHAKTHI

Please find your credentials and instructions for the CA2 React Assessment below:

Credentials

- Password: 499528

Test Server Details

- Base URL: <https://t4e-testserver.onrender.com/api>

Mandatory Instructions

1. **Authentication & Data Fetch:** Ensure proper integration using the API → Context → Reducer architecture.
2. **Routing:** Implement the following routes exactly as specified, including their corresponding ID, /filter, and /stats routes. Route names must match exactly to pass evaluation.
3. **Test IDs:** Use the mandatory data-testid attributes for list rendering, filter inputs, and the stats page as outlined in your assessment requirements.

List Rendering:

- data-testid="order-item" / activity-item / course-item / event-item

Filter:

- data-testid="filter-input"

Stats Page:

- data-testid="total-orders" / total-activities / total-courses / total-events
- data-testid="delivered-orders" / goal-achieved / active-courses / active-events
- data-testid="cancelled-orders" / goal-not-achieved / inactive-courses / soldout-events

4. **Global State:** In the Stats component, you must expose the window.appState object containing all required count metrics.

5. **Deployment (Vercel):** Create a vercel.json file in the root folder with the necessary rewrite rules to handle client-side routing.

Submission

Deploy your project to Vercel and submit the live URL via this form: <https://forms.gle/R2HyM8hexjAKcuot6>.
Submissions must be completed on or before 8:45 a.m.

Important Notes

- Strictly follow Context and Reducer architecture.
- Use reduce or filter rather than storing derived values.
- Handle inconsistent data and maintain clean code.

If you encounter any issues during the assessment, please contact the trainer immediately.
